

1. Test Fit

Move the laptop around inside the bag and decide where you'd like it positioned.

2. Attach Bottom Corner Pockets

Position and affix two bottom corner pockets.
Position elastic bands towards outside corner of case.

3. Affix Two Velcro Dots

Peel back the liner and stick velcro dots to the bottom of the laptop.
These two dots will prevent the laptop from sliding around in the bag.

4. Install Laptop

Insert the laptop into the two bottom corners, and press down around the two velcro dots to lock it in position.

5. Attach Laptop Screen Corners

Attach two corner pockets around the laptop's screen

6. Close the Bag

Close the laptop itself first, then close the bag lid and press lightly.
This will engage the velcro corner pockets to grab onto the inside of bag lid.

7. Ready to Use

When you open/close the bag, the laptop will follow as well. Keep your laptop inside the bag at all times for the very best protection. Laptop can be charged in-bag by partially unzipping around the charging port.
